“We strive to design and deliver sustainable products that are driven by technology through innovation.”

—— Andrew Cox, Managing Director

# EVONIC FIRES

## A BRIEF HISTORY

### 2005

CK Fires Ltd is established in Stratford-Upon-Avon by Managing Director Andrew Cox with a view to providing quality electric fireplaces to the UK market at competitive prices.

### 2010

After establishing a foothold in the heating industry with CK Fires, Andy and the team launch Evonic Fires – a contemporary brand with bold ideas on what the modern electric fire should be.

### 2013

Evonic Fires wins 'Suite of the Year' award at the National Fireplace Exhibition, and again in 2015, cementing their place as market leader.

### 2016

Evonic release their revolutionary original e-series range. This was the birth of what we now know as the archetypal, linear style built-in electric fire. The e-series range claims 'Electric Appliance of the Year' award at the National Fireplace Exhibition.

### 2017

Another successful year, with the e-series range claiming 'Electric Appliance of the Year' for the second year running. This was followed by the release of our patented Halo technology, making our products the world's first 'smart fires'.

### 2018

Majority shareholding acquired by leading Swedish heating conglomerate NIBE.

### 2019

Evonic Fires become one of the world's first electric fire manufacturers to incorporate Amazon Alexa and Google Assistant compatibility into their products.

### 2021

Development of our patented e-Ilusion® flame effect

### 2022

CK Fires gain ISO:9001 certification, meaning our processes and production have been judged to consistently deliver products and services that meet customer and regulatory standards.

### 2023

CK Fires gain ISO:14001 certification, which means we have implemented practises within our business that reduce our environmental footprint by using an effective environmental management system.

# EFFORTLESS

## CONTROL

Access and control the features of our fires through the E-smart cloud App on your phone or tablet. These fires are compatible with Amazon Alexa or Google Assistant for voice control. A remote handset comes as standard with all models, or can be integrated into a home automation system, such as Control 4.

### CLOUD APP

Download the E-smart cloud App to your smart device for seamless control at the touch of a button. Available from the Apple App store or Google Play.

### REMOTE CONTROL

The slimline E-smart remote control will come as standard with all listed products, allowing customers to easily control all the features of their fireplace, without connecting to their home Wi-Fi.

### VOICE CONTROL

Our products are also fully compatible with both Amazon Alexa and Google Assistant. Through a simple setup process, customers can operate their appliance using voice commands which control power, heat, and flame effect.
